

2010 February, 22nd

- Beth Israel Hospital Radiology - Boston, Massachusetts, USA
- Criminal Fraud →

The next MRI, taken in February, 22nd, 2010 is an incomplete MRI series (the patterning of trying to hide medical evidence for MS starts). How the medical data is hidden by a radiologist is later demonstrated and included in the USB.

All MRIs are required to have a certain number of images and planes. It means that the technician went against typical medical form and didn't record all the images and planes required by a neurologist to make any assessment or simply (as shown in later MRIs) erased the MRI series and images that do show disease process. Then a falsified MRI report is written from the remaining data.

Eg. In this MRI a T1 Sagittal plane there must also be a T1 Axial plane, its missing. Ill show the comparison between series below:

Note the comparison between the MRI taken in December, 18th, 2008 February, 22nd, 2010 and December 27th 2012. The MRI in February, 22nd, 2010 is missing 4 or 5 planes and images typical of all MRIs ever taken (that's 4 entire series of images). Making it impossible for any neurologist to determine anything useful in medicine. Fraudulence in radiology causes criminal negligence in neurology (which is later determined to be intentional). There are several doctors that have mentioned that these MRI series are incomplete.

Its possible to prevent treatment by simply erasing the MRI slides that show the condition and falls under clinical fraud.

In future MRIs there are again attempts at hiding MRI images in the US and abroad. For example in a 2019 MRI series, there was an attempt to hide 799 MRI series images in an MRI that initially contained 1780 images, which is a lot (about half the data that was attempted to be hidden). A video of how MRI data is hidden is included in the USB; its not hard to erase or hide MRI series images. There is another video of a radiologist in Riga, Latvia in the USB that shows the radiologist limiting the MRI machine to not record diseased and inflamed parts of the spine as well.

The video is clear and undeniable in demonstration.
