

### Condition During Negligence in 2008 to 2010

When these pictures were taken in 2008, 2009, and 2010 (there are lots more not included).

My brain and cervical spine had gross and mass lesions along the cervical spine (inflammation in the cervical spine).

With gross lesions that eventually cause gross progressive neurodegeneration by 2017, there is no way that I could physically move.

The reason for my inability to move and interact with the world around me at that point in time is entirely due to the negligence and malice perpetuated by Dr. Evan Murray, Dr. Bruce Price, Dr. Richard Falzone, and Dr. Ellen Salurand.

This was in the hospital.

The headache from the cervical lesions was massive so I would position my head in such a way that I wouldn't move and close my eyes (there is no way to stop the headache except with medications for MS since it's a inflammatory lesion). You could determine where the cervical lesions are simply by looking at the way I positioned my head in the pictures (there are far more pictures which aren't included for reporting purposes). The headache was so massive that I couldn't move from my bed. I was unable to stand up at times due to pain from the cervical lesions and I was completely isolated during this entire period of time with no one to help even when I repeatedly asked for help in medical settings. The doctors then aggressively refused to acknowledge anything and often acted in a condescending manner with respect to me.
