There was/is no reason to harm me. They are harming me now to try and cause death because they harmed me in the past and they are trying to hide the crime by murdering me. They attempted homicide on November 23rd 2021 using cardio toxic medications given when sleeping:

(This is me in the hospital after the murder attempt).

They try to commit murder in a hidden underhanded way but their over all reasoning for committing a crime to my death is "we don't think we would get caught" if you are dead. They often state they cause harm because "we are unreachable" when we cause harm so we would never get in trouble for it.

Their past crimes include:

Sexual discrimination using the effects of the condition as justification. This includes trying to force sexual incongruity against personal standards and intentionally isolating me from all adult females in the US to restrict normal interpersonal relationships. I am heterosexual.

Their objective is to cause neurological brain damage/dementia to the point of me not being able to work according to my typical intellectual potential. Their idea is to intellectually disable me to not be able to work in any task to fit their mis portrayal and mis typification.

They limit work by discrimination in basic livelihood using the effects of the mistreated neurological condition as justification. Most of the jobs I applied to (thousands of jobs) are below my qualification as a engineer.

Though I clearly have an IQ far greater than the average person, they use the effects of my clinical condition to state that I am "odd" or "mentally deficient". I am generally mis-typified using the effects of the condition, I am called "odd" or "mentally deficient", but i'm not.

The US cites nonsensical and irrelevant arguments to justify mistreatment in medical settings to intentionally effect social, professional, and interpersonal relationships.

Discrimination in the US due to my neurological condition that goes well beyond medicine. Mis-portrayal in a social space using the effects of the condition to effect a person negatively in a interpersonal space. Eg. Intentional isolation for several years at a time.
