

The listing of well recorded repeated assaults in medical settings is given below to show how physical harm were perpetuated in medical settings in the US and abroad and what the overall consequence was.

Eg. From the last assault in a clinical setting in a ER setting in the US in 2017 resulted in 3 separate ER presentations in different foreign nations requiring IV medications and medical treatment. This was because the US refused to give the medications when in clear need. Its described in detail in this listing. All three ER appointments where assault didn't take place and were IV methylprednisolone was given resulted in a successful outcome.

The third ER there after was another assault believed to have been perpetuated by the US using a clinically fraudulent medical test in Berlin, Germany.

The fourth clear clinical assault in a medical setting took place in the UK. Which is explicitly described with evidence here.

The historical assaults in a clinical setting have a very particular patterning to them:

1. They always involve clinical fraud followed by withholding medications using fraudulent clinical test results or clinical reports.
2. The object the assault is always explicitly stated to cause harm.
3. The long term goal of repeated assault is to cause intellectual or physical disfigurement through medical negligence. The effect is to use the effect of physical or intellectual disfigurement to redundantly and recursively harm the patient in other settings.

The idea is to keep a person sick in the interim to mis portray the person.

Its essentially using harm to harm the patient and use the effects of harm to perpetually harm the patient, which is why asylum was required to stop the cycle.

Technically all instances of medical fraud and clinical appointments are examples of assault in medical institutions.

But ER visits serve as the easiest examples of clinical assault, since they are emergency situations requiring emergence medications for the clinical condition.

The four clear instances of clinical assault are given in this listing:

April 29th 2017- Sharp Hospital Emergence Room followed up by clinical assault by Dr. Paul Raffer in an outpatient clinic.

August 16th 2017 – UCSD Hospital Emergence Room Assault followed by clinical treatment in a foreign nation (Mexico) where the appropriate assessment for medications was made with medications immediately given.

March 11th to March 17th 2018– Berlin, Germany - Gross clear example of assault in Charity Hospital Berlin using fraudulent lab reports and falsified statements by the ER doctor to cause harm to the patient.

April 11th to April 14th 2020- Cambridge, United Kingdom- Gross clear example of assault in a medical setting with the object of physical disfigurement.
