2008 December to 2017, bed ridden in the US due to medical neglect and lack of treatment in any medical facility in the US. It's the policy of the US to not give treatment for MS, caused by neurotoxicology.

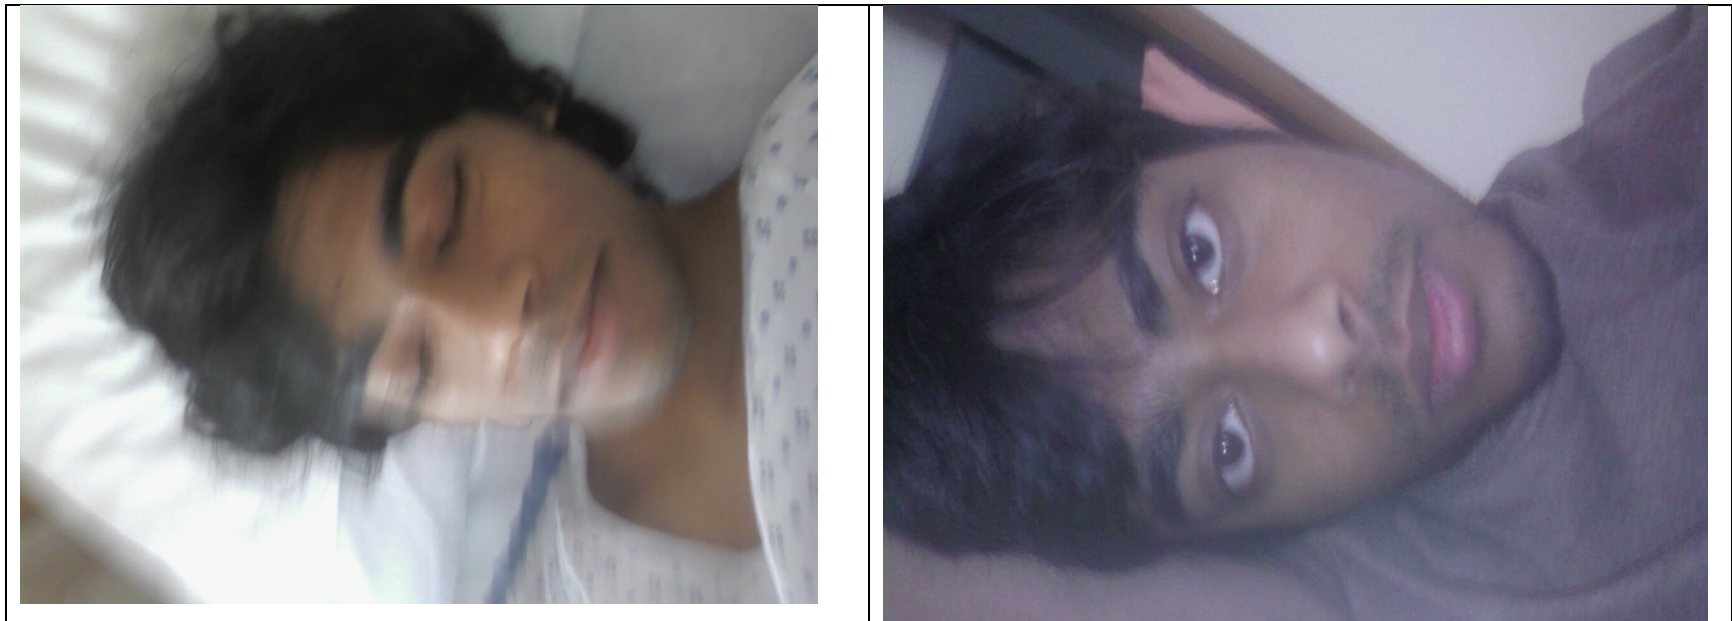

When these pictures were taken in 2008, 2009, and 2010.

My brain and cervical spine had gross and mass lesions along the cervical spine. I was in extreme cervical spine caused pain so I

couldn't move from my bed for 8 years. The doctors wouldn't give me any multiple sclerosis medications or pain medications so I remained in bed for 8 years.

I didn't know it caused gross progressive neurodegeneration by 2017, there is no way for me to know except that I was in pain and in pseudobulbar effect..

The reason for my inability to move and interact with the world around me at that point in time is entirely due to the negligence and malice perpetrated by Dr. Evan Murray, Dr. Bruce Price, Dr. Richard Falzone, and Dr. Ellen Salurand.

The headache from the cervical lesions was massive (persistent 24/7 pain) so I would position my head in such a way that I couldn't move. You could determine where the cervical lesions are by looking at the way that position my head in the pictures. All I could do was lay down. I was unable to stand up at times due to the pain from the cervical lesions and I was completely isolated during this entire period of time with no one to help even when help was repeatedly asked for in medical settings. They refused to do any diagnostics or give any treatment. Its stated as the reason for social isolation (premeditated).
