My uncle pictured in this article, though he never played a role in my case may have died in relation to my case. The location of his death indicates that it is related because he happened to be near the same place as where I get occasional medical treatment in New Delhi (my family isn't from New Delhi and he is never there) when it happens. His death happens near the hospital when I'm not in India. I don't fully know why he is there but they said a academic conference.

My extended family in India has no role in this case because they have never been informed about the case by me. They remain separated until now due to murder.

The case has no participation in by family (either immediate or extended). The case is determined by lawyers in foreign nations and court physicians (physicians assigned by a legal court). Even my father doesn't have much participation. But those persecuting me think they do have participation so they harmed them and in this case to murder.

Those harming me have a particular behavior where they harm arbitrary people at the risk that they would be found out, but family doesn't know. It's believed that they have harmed thousands of people, at the risk of being caught.

My uncle pictured above may have been murdered by those harming me in 2022 before July. He simply happened to be a doctor so they murdered him. So that ties into a risk for family, unknown to all of us. Since it's a international case it effected family, but with no mention by me to family of what my condition is.

The entire time period from May of 2021 to 2023 in a horrifying situation of them using this system to cause morbid harm to me and others; often arbitrary people. They said thousands were effected.

The location of my hospital treatment is in the south east of New Delhi in Apollo Hospital. And it seemed strange that a person from Madras (Chennai) India (my uncle) would be in New Delhi, India (where he typically isn't) when he died. The doctors in the hospital aren't related to my uncle. The hospital had participated in diagnostic fraud recently as well. Its related. They said the coincidence of that the location of his death is only a few miles from my hospital in New Delhi.

I wasn't in India at that point in time nor do I know anyone else there except my doctors in Indraprastha Apollo Hospital and the National Thalassemia Clinic. The family doesn't know that

I have been to India to see a doctor in Apollo Hospital either (never informed them that I went to New Delhi before). This is recent persecution to either murder or death of family in India.
